PROFESSIONAL PROFILE

Cybersecurity specialist, current student at [UNICEN](#), B.Sc in Systems Engineering. Worked in Accenture as Security Delivery, Identity and Access Management Support. Passionate about technology with strong networking and cybersecurity technical background. Proactive person with experience in customer service tasks and solving issues across teams.

Pinamar, Buenos Aires, Argentina.

WORK EXPERIENCE

IT Support Technician (IAM)

ARG - Mar 2024 - Dec 2025

- Documentation: Achieved the migration of more than 1700 roles and 450 applications from on-prem server accesses to a centralized platform from Accenture.
- Security governance: Responsible for the compliance aspects of migrations, following group policies, SOX regulations and cloud resource management with clear documentation and well defined procedures.
- Maximized powershell and python scripting to automate data management tasks. e.g.: Detection of Azure groups not following SOX policies.
- Participated in technical design and user migration discussions for Accenture's internal access management system for privileged accounts.

Cashier & Support Staff

ARG - January 2020 - March 2024

- Handled cash and card payments while providing friendly service to customers.
- Helped with daily operations beyond the cashier role, including restocking, cleaning, and organizing orders.
- Applied communication and active listening skills to understand customer needs and to resolve issues on the spot.

PROJECTS

Financial Feeling - Personal Project

[Link to Demo](#)

Developed a platform for tracking a selected watchlist of assets to analyze the impact of real-time news on their short, medium, and long term performance. **React/Nextjs + TypeScript** frontend with client inference (**Transformers JS**) using FinBERT Forecaster model via a npm package created by me named [ffback](#). Database managed through **Supabase** BaaS.

Komanda - Personal Project

[Link to Repository](#)

Developed a full-stack ordering and management system for food businesses, with menu content managed from a **Strapi CMS** and exposed through a custom API route for real-time updates. **Next.js + TypeScript** frontend with **Neon + Drizzle** for database management, **Mercado Pago** integration for checkout flows, and a Raspberry Pi print service for handling order printing. The system also supports temporary cart persistence and centralized menu/category data modeling through the admin panel.

EDUCATION

B.Sc. in Computer Systems Engineering UNICEN

2023 - 2027 (expected)

University Diploma in Artificial Intelligence (DUIA) UNICEN

2026 - 2026 (expected)

CERTIFICATIONS

English: C1 Advanced • Cambridge	2022
English: B2 First • Cambridge	2022
Finnish: A1 • Helsinki University	2025
Italian: Elemental • UNICEN	2026 - 2026 (expected)

TECHNICAL SKILLS

Programming Languages:	TypeScript/JavaScript, Python, C++, SQL, Bash, Go.
Full-stack TypeScript:	Next.js 15/16, React 18/19, Vite, Astro, Tailwind CSS, API routes, server/client components.
Backend/API:	Node.js, Express, REST APIs, authentication middleware, OAuth/PKCE, JWT/JOSE, bcrypt, webhooks, Strapi CMS integrations.
Databases:	PostgreSQL, Supabase, Neon, Drizzle ORM, Sequelize, SQL migrations, schema design, indexes, relational data modeling.
Automation/Scraping:	Playwright/Patchright, Cheerio, browser automation, persistent sessions, ATS autofill, captcha/block detection, form diagnostics.
AI/NLP:	Groq/OpenAI-compatible APIs, prompt engineering, Transformers.js embeddings, FinBERT/ ffback sentiment workflows, RSS/news analysis.
DevOps/Quality:	Docker, Docker Compose, Dokploy, GitHub Actions, CI linting, type checking, testing, coverage reports, security audits, ESLint, Vitest (TDD), Supertest.
Observability/Product Analytics:	Sentry, OpenTelemetry, Grafana Cloud, Mixpanel.
Systems/IoT:	Python scripting, Linux, Raspberry Pi, Bash scripts.
Networking/Security Foundation:	TCP/IP, IPv4/IPv6, routing, VLANs, Cisco IOS basics, HTTP, Wi-Fi, OWASP Top 10, nmap, Wireshark, Burp Suite, sqlmap, wfuzz.
Software Development Life Cycle (SDLC):	Requirement analysis, system specification, design, implementation, architectural patterns, and documentation.
Algorithm Analysis:	C++ implementations of algorithms and data structures; DP, D&C, and optimized problem-solving techniques.
Mathematical Background:	Calculus, Algebra, Linear Algebra, Discrete Mathematics, Physics.

SOFT SKILLS

Analytical thinking:	Diagnosed complex internal-access faults across 1,700+ roles / 450+ applications by tracing group nesting, policy scope and audit logs; selected minimal-change fixes and documented root causes.
Communication:	Required clear coordination and intercommunication within my group peers in academic settings. Professionally, regularly assisted multicultural teams by troubleshooting access issues, guiding users unfamiliar with internal systems, and supporting data corrections and migrations.
Collaborative teamwork:	Successfully collaborated within team projects from UNICEN, e.g.: design and configure a scalable network infrastructure project using both IPv4 (with VLSM and static routing) and IPv6 (with RIPng). Link to project
